QUESTION

Mention the ways to vaccinate the whole people of India as early as possible.

ANSWER

India has a population of nearly 1.38 billion. So make them vaccinated is a big process. One of the major things that should be done to make people get vaccinated is by increasing the vaccination availability and centers for vaccination. It should be mandatory for each panchayath to have at least 10 vaccination centers. Schools and other buildings can be turned into vaccination centers. The panchayath should make a team of Asha workers, health instructors, and ward members. Each ward member should take the responsibility to make sure that everyone in his ward is able to get vaccinated, by making a list of people in his/her ward who should get vaccinated and who got vaccinated. Appointments should be made for those who are pending to take the vaccine at the earliest. By doing this government can make sure all people are vaccinated.
